

# ROADSAFE DIFF DROP

COMPATIBLE WITH TOYOTA LANDCRUISER 300 SERIES 2021+

When lifting a Toyota Landcruiser 300 Series, the Constant Velocity (CV) joints are put on an increased angle. This increased angle of the CV joint during operation can accelerate the wear on the joint, as well as putting additional stress on the CV boots leading to splitting and eventually premature failure of the CV.

The Roadsafe IFS Diff Drop Kit is supplied complete with all the necessary replacement diff arms and fitting kit. The bolt on kit corrects the geometry on the front driveshafts and CV's, lowering the front diff by approx. 25mm, thus reducing the angles the CV joints need to operate on, and avoiding the expensive replacement of CV's and boots.

- Engineered from 10mm steel plate
- Bolt in design utilizes factory mounting points
- E-coated for heavy duty corrosion resistance
- Rubber bushings manufactured to OE specifications
